OVERVIEW

Engineered with a full composite frameset including the front triangle and rear swingarm, this 29er has 90mm of smooth rear suspension travel and 100mm up front. The Maestro rear suspension system includes a trunnion mount shock that produces a lower leverage ratio for efficient pedalling and braking performance. The innovative linkage makes room for shorter chainstays to improve climbing capabilities and overall agility. The Advanced Forged Composite upper rocker arm is lighter, stiffer and stronger than aluminium and other updates include wider Boost hub spacing and an integrated Giant WheelSystem that gives you super strong and stiff wheels for confident, precise handling on XC terrain.

KEY PERFORMANCE FACTORS

XC Efficiency: Advanced Composite frameset (mainframe and rear swingarm) is superlight with aggressive 69-degree headtube and 73.5-degree seattube angles for faster climbing and accelerating.

29er speed and stability: Frame geometry and suspension are optimised for 29-inch wheels to deliver a race-winning combo of speed and stability on XC terrain.

Traction and control: Updated Maestro Suspension with an Advanced Forged Composite rocker arm and trunnion-mount shock delivers smooth suspension performance on XC climbs, corners and descents.
